

Ideation Phase
Define the Problem Statements

Date	28-06-2026
Project Name	Automated Network Request Management
Team ID	
Maximum Marks	

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A frontend developer preparing for a time-sensitive hackathon.	Request specific firewall port openings to connect my vanilla web application to an external API.	The request process takes several days and requires manual follow-ups via email.	The current process lacks a centralized service catalog and has no automated routing for manager and security approvals.	Stalled, anxious about missing my deployment deadline, and frustrated by the lack of transparency.

PS-2	An IT Network Administrator responsible for system security and auditing.	Review, approve, and fulfill user network requests efficiently while maintaining compliance records.	I spend hours tracking down missing information and manually logging changes for audits.	Users submit incomplete requests through unstructured channels, and there is no automated system to enforce mandatory fields.	Overwhelmed, prone to making errors, and stressed during compliance audits.
