Empathy Map:

User Persona: The End-User / Employee

(A non-technical employee who urgently needs network access or a port activation to complete their daily work).

What does he THINK AND FEEL?

- Wants to get back to work immediately without dealing with IT bureaucracy.
- Worried about missing project deadlines due to lack of network connectivity.
- Feels anxious and confused when asked highly technical questions about IP addresses or network switches.

What does he HEAR?

- Colleagues complaining that "IT requests take days to get approved."
- Managers repeatedly asking, "Is your network issue fixed yet? We need you online."
- Industry standard expectations that software should be instant and automated.

What does he SEE?

- A cluttered, confusing legacy IT portal with too many options.
- Coworkers manually chasing down managers for email approvals.
- A stark contrast between instant consumer apps (like Amazon) and slow enterprise IT processes.

What does he SAY AND DO?

- Submits a request and immediately pings the IT helpdesk on chat for an update.
- Complains in meetings about how difficult it is to request new hardware or access.
- Refreshes his email inbox constantly waiting for a status update.

Pain & Gain Analysis

Category	Details
Pain (Fears, Frustrations, Obstacles)	Waiting days for manual manager approvals. Having zero visibility into the status of the request. Filling out forms that ask for irrelevant or confusing information.
Gain (Wants, Needs, Success Measures)	A simple, clean, dynamic form that only asks necessary questions. Automated status emails so he doesn't have to guess where the request is. Network access granted within hours instead of days.
