Data Flow Diagram & User Stories

Date	28-06-2026
Project Name	Automated Network Request Management
Team ID	
Maximum Marks	

Part 1: Data Flow Diagram (DFD)

Since I cannot draw the shapes directly on your document, here is the text you should use for the **Simplified Flow** section, which you can also use to easily generate your visual diagram.

NETWORK REQUEST MANAGEMENT SYSTEM: DFD LEVEL 0 (INDUSTRY STANDARD)

Simplified Flow Steps:

1. The **User** logs into the ServiceNow portal, navigates to the Service Catalog, and submits the Network Request form.
2. The **ServiceNow System** captures the variables and automatically creates a new record in the custom Network Database table.
3. The **ServiceNow System** triggers an initial confirmation email to the User's email address.
4. The workflow routes the request data to the **Manager (Approver)** via the "My Approvals" dashboard.
5. Upon approval, the system updates the Network Database record status to "In Progress".
6. The **IT Fulfiller (Network Team)** views the backend record, provisions the network access, and updates the status to "Closed Complete".
7. The system sends a final resolution email to the **User**.

Part 2: User Stories

Here is the completed User Stories table based on the template provided. It covers the three main personas of your project: The Requester, the Approver, and the IT Fulfiller.

User Type	Functional Requirement (Epic)	User Story / Task	Acceptance criteria	Priority
Requester (End User)	Request Submission	As an employee, I want to submit a network request via the Service Catalog so that I can get the required connectivity for my work.	Request is successfully submitted and a tracking number (REQ) is generated.	High
Requester (End User)	Form Automation	As an employee, I want my contact details to auto-populate on the form so that I don't have to type them manually.	Email, Phone, and Username auto-fill when 'Opened on behalf of' is selected.	Medium

Requester (End User)	Notifications	As an employee, I want to receive email notifications regarding my request status so that I am informed of the progress without guessing.	Automated emails are triggered upon initial submission, and upon final completion.	High
Approver (Manager)	Request Approval	As a manager, I want to receive an approval notification in my dashboard so that I can securely authorize my team's network access.	Request appears in "My Approvals" module and the flow pauses until a decision is made.	High

IT Fulfiller	Request Tracking	As an IT admin, I want the system to automatically create a backend database record so that I can track and manage the fulfillment status.	A distinct record is created in the Network Database table with a "New" or "In Progress" status.	High
IT Fulfiller	Dynamic UI	As an IT admin, I want the request form to dynamically hide irrelevant fields so that I receive clean, accurate data.	The "Please specify" field only appears when the user selects "Others" from the Device Type dropdown.	Medium
