Team ID	
Maximum Marks	

Journey Map: Network Access Request

Scenario: An employee needs to request VPN access or a firewall port change and uses the new ServiceNow portal to do it.

Journey Phase	User Actions & Goals	Experience & Opportunities
1. Entice (Awareness)	Action: Realizes they lack access and asks a colleague, who directs them to the IT Portal. Touchpoints: Slack/Teams, Office environment. Goal: "Help me figure out how to get network access quickly."	[+] Relieved there is a dedicated portal for this. [-] Frustrated by the initial roadblock preventing their work. Idea: Provide direct links to the catalog form in IT onboarding docs or automated Slackbot replies.

2. Enter <i>(Beginning)</i>	Action: Logs into the ServiceNow portal and navigates to the "Networks and Connectivity" category. Touchpoints: Web browser, Portal interface. Goal: "Help me find the right form without clicking through confusing IT menus."	[+] The catalog item is clearly labeled and easy to locate. [-] Searching can be annoying if the catalog has too many uncategorized items. Idea: Add a "Quick Links" section on the portal homepage so returning users don't have to search.
3. Engage <i>(Core Process)</i>	Action: Opens the "Network Request" form, fills in device details, and clicks "Order Now." Touchpoints: Dynamic form fields. Goal: "Help me fill this out easily without needing to know complex IT jargon."	[+] User details auto-populate; irrelevant fields stay hidden to keep the form clean. [-] Confusion if they don't know exactly what to type in free-text fields. Idea: Use choice dropdowns instead of open text boxes to reduce user error and guesswork.

4. Exit <i>(Finishing)</i>	Action: Receives confirmation email. Manager approves, and IT fulfills the request. Touchpoints: Email inbox, ServiceNow backend. Goal: "Help me know my request isn't lost in a black hole."	[+] Instant email confirmation and fast manager approval. [-] Anxiety while waiting in the "Requested" state if the manager takes too long. Idea: Implement a live status tracker on the portal so the user doesn't have to rely solely on emails.
5. Extend <i>(Aftermath)</i>	Action: Receives the final "Completed" email and successfully connects to the network. Touchpoints: VPN client, target workspace software. Goal: "Help me get back to my actual job."	[+] The network connects flawlessly. [-] Discovering the access still doesn't work if IT misconfigured the backend. Idea: Send an automated CSAT (Customer Satisfaction) survey one day later to rate the IT fulfillment speed.
